

HYDRAULIC THUMBS

KNAPP Hydraulic thumbs allow you to DO MORE with your excavator by working with your bucket so you can grab and pick up almost anything.

The thumb is mounted to the dipper arm of your excavator so you can use the machine like a jaw against the bucket to grab items such as rocks, scrub, logs and debris.

Move the thumb to the position you want up to 135 degrees.

Move the bucket back and forward to secure what you are grabbing or picking up against the thumb.

When your KNAPP Hydraulic Thumb is not in use, it tucks away. A separate position pin can be used to secure it in place. If you do not need to use thumb for a long period of time, or you need to reduce weight on the dipper arm, you can unpin the thumb and remove it from its backing plate.

WHY A HYDRAULIC THUMB VS OTHER GRAB ATTACHMENTS?

A Hydraulic Thumb is the most versatile option for grabbing and picking up almost anything. It can be used with multiple buckets.

As your KNAPP Hydraulic Thumb tucks away when not in use, you have it on hand to use in any situation with whichever bucket you have on your excavator. You don't need to make sure you have a separate "Grab" bucket on site, nor do you need to change buckets. Simply extend your hydraulic thumb and you have an instant "grab attachment."

The KNAPP Hydraulic Thumb is ideal if you frequently need to pick up a variety of different objects.

DO MORE.
